No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                          Score

                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                          cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritonael cavity, pleura, or brain. The peptides are used to inage blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   whose 3-dimensional structure is modelled on the expose loop of human MEGFD (vascular endothellal growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclicing the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold
                                                                                                                                                                                                                                                                                                                           Sequence

The sequence is used in a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-regional procession of the condition of cold trauma, substance-induced post-regional processions, head, heat or cold trauma, substance-induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; VEGF-D; vascular endothelial growth factor; angiogenesis; neovascularisation; lymphangiogenesis; psoriasis; tumour; diabetes induced neovascular sequelae; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human VEGF-D amino acids Vall01-Thr 173.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a peptide loop fragment from an exposed loop of a growth factor protein by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          18-JAN-2000;
16-MAY-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 diabetic retinopathy; chronic inflammation.
                                                                                                                                                                                                      dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, Cor -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence represents Human VEGF-D (vascular endothelial growth factor) amino acids Vall01-Thr 173, used together with the C-terminal 23 residues of VEGF to make a hybrid theoretical molecule for 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2001-442248/47.

                                            CC angiogenesis, neovascularisation or lymphangiogenesis. The condition is conditionally provided to the condition is conditionally provided to the conditional co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence represents Human VEGF-D (vascular endothelial growth factor) amino acids Val101-PRO186. The sequence is used in a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a peptide fragment from an exposed loop of a growth factor protein by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAU04520 standard; protein; 96 AA

                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                            biological activity. VEGF-D antegonists, e.g. antisense nucleic acids or triplex DNA, VEGF-D variants or antibodies (especially chimeric antibodies), are useful for the treatment or alleviation of malignant or melanomas, tumours or psoriasis. Anglogenesis and lymphangiogenesis stimulating amounts of VEGF-D can be administered to enhance the cacceptance and/or healing of skin grafts or to stimulate the healing of acceptance and/or healing of skin grafts or to stimulate the healing of a surgical or traumatic wound to the skin. Lymphangiogenesis stimulating amounts of VEGF-D can be used to treat lymphedema.

C stimulating amounts of vEGF-D can be used to treat lymphedema.

C indothelial proliferation stimulating amounts of VEGF-D are used to treat anhydrotic ectodermal dysplasia. VEGF-D antibodies are useful for detecting tumours expressing VEGF-D. Fully-processed VEGF-D can be used to stimulate at least one VEGF-D bloactivity chosen from endothelial cell proliferation, migration, survival and differentiation and lymphangiogenesis without induction vaccular researchilter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT

                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                  and lymphangiogenesis without inducing vascular permeability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents human vascular endothelial growth factor (VEGF)-D. The specification describes a human cell line which stably expresses VEGF-D, or fragments/analogues having VEGF-D biological activity. VEGF-D antagonists, e.g. antisense nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A human cell line stably expressing vascular endothelial growth factor D, useful for treating melanomas or tumours expressing VEGF-D
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 6; Page 72; 79pp; English.

                                                                                                                                                                                                                                                                                                                                                           (vascular endothelial growth factor D), lacking both the N- and CC C-terminal regions. The invention relates to a monoclonal antibody, or CC fragments thereof, which is specifically reactive with the truncated CC human VEGF-D, and methods of preparing the antibody. The antibody of the Cinvention interferes with the binding of VEGF-D to the VEGF receptors CC VEGFR-2 and VEGF-3, but does not interfere with the binding of VEGF to these receptors and additionally is not reactive with VEGF-C. The CC antibody may be used to treat disorders associated with vascular CC permeability, endothelial cell proliferation, anglogenesis, neovascularisation and endothelial cell differentiation, especially cancer, diabetic retinopathy, psoriasis, and CC arthropathies. The antibody may also be used to treat fluid accumulation CC in the heart and/or lung via modulation of vascular permeability. It may CC additionally be used to detect VEGF-D and may be used to image lymphatic CC additionally in tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PR

CC D (VEGF-D). VEGF-D can be used for e.g. acceleration of angiogenesis of in wound healing, tissue or organ transplantation, or to establish accollateral circulation in tissue infarction or arterial stenosis, and inhibition of angiogenesis in the treatment of cancer or of diabetic retinopathy. It can also be used in the treatment of lung disorders to improve blood circulation and organization of in the lung and/or gaseous exchange between the lungs and the blood account the lung and/or gaseous exchange between the lungs and the blood account of the lung and/or gaseous exchange between the lungs and the blood account of the lung and paseous exchange in chronic obstructive airway disease, and gaseous exchange in chronic obstructive airway disease, and an indicator of future metastatic risk. Antagonists can be used a indicator of future metastatic risk. Antagonists can be used a involving accumulations of fluid in the lung resulting from the invasculary resonability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                vascular endothelial growth factor; VEGF-D; angiogenesis;

                                                                                                           increased vascular permeability), diabetic retinopathy, rhematoid arthritis or psoriasis. Agonists are also useful for stimulating (lymph)angiogenesis. The proteins are also useful for stimulating binding agents (potential therapeutic agents) and to raise antibodies. The antibodies are useful as therapeutic (ant)agonists; for detection, purification and targeting of proteins for in vivo or in vitro diagnosis (including imaging) or for therapy (including when linked to e.g. a label or cytoroxin); and for immunotyping of cells, e.g. for detecting minimal residual disease or haematopoietic progenitor/stem cells. It is also contemplated that the sequences might be useful for treating a very wide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAY97572 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                          expression. Particularly they are used to stimulate wound healing, growth of damaged bone and tissue, and for repair of vascular tissue, especially peripheral arterial disease, critical limb ischaemia or coronary disease. Antagonists of the sequences are used to inhibit angiogenesis in tumours and to treat inflammation (where associated was angiogenesis of the sequences).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid encoding angiogenic proteins, useful e.g. for promoting healing of wounds and treating peripheral arterial disease, critical limb ischaemia or coronary disease - \!\!\!\!
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human VEGF-D protein sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  05-APR-2001 (first entry)

The present sequence represents a human zvegf2 growth factor encoded by the zvegf2 cDNA which was isolated from a human heart cDNA library. zvegf2 protein in a dimeric form acts as a mitogen for fibroblasts or smooth muscle cells. zvegf2 is claimed to be useful for stimulating the revascular/sation of tissue or the re-endothelialisation of vascular
                                                                                                                                                         Claim 1; Pages 53-54;
                                                                                                                                                                                           New isolated vascular endothelial growth factor - used to develop products for treating e.g. wounds, burns, myocardial infarction, tumours, psoriasis, arthritis, restenosis or organ transplants

The zvegf2 protein is also claimed to be useful as an additive in tissue adhesives for promoting revascularisation of the healing tissue. Antagonists against zvegf2 can be used to block its mitogenic, chemotactic and anglogenic effects. The antagonists may therefore be useful for reducing growth of solid tumours by inhibiting neovascularisation of the developing tumour or by directly blocking tumour cell growth, in the treatment of diabetic retinopathy, psoriasis, and content and cont

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in wound healing, tissue or organ transplantation, or to establish collateral circulation in tissue infarction or arterial stenosis, such as coronary artery disease, and inhibition of angiogenesis in the treatment of cancer or of diabetic retinopathy. It can also be used in the treatment of lung disorders to improve blood circulation in the lung and/or gaseous exchange between the lungs and the blood stream or to improve blood circulation to the heart and 02 gas permeability in cases of cardiac insufficiency, to improve blood from the cardiac insufficiency, to improve blood from the cardiac insufficiency, to improve blood from the cardiac insufficiency in improve blood from the cardiac insufficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  flow and gaseous exchange in chronic obstructive airway disease, or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VEGF-D in cancer biopsy specimens may be useful as an indicator of future metastatic risk. Antagonists can be used for treating e.g. conditions such as congestive heart failure, involving accumulations of fluid in the lung resulting from involving accumulations of fluid in the lung resulting from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence is that of human lung vascular endothelial growth factor D (VEGF-D). VEGF-D can be used for e.g. acceleration of angiogenesis
                                                                       The present sequence represents human vascular endothelial growth factor D (VEGF-D). The VEGF-D protein, compounds and antibodies, which can bind the protein, may be useful in, e.g. gene therapy and in treatment of inflammation and oedema. Vectors, containing the VEGF-D DNA, and VEGF-D DNA sequences may be used for screening for the compounds which bind to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAW44293 standard; Protein; 354 AA.

                         This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has CC vulnerary, cytostatic, antirheumatic, antiarthritic, antisporiatic and CC antidiabetic activity and acts as an angiogenesis and vascularization CC regulator. An antisense molecule of the invention is useful for treating CC or preventing cancer, rheumatoid arthritis, psoriasis and diabetic CC retinopathy by inhibiting angiogenic activity or inappropriate CC vascularization including formation and proliferation of new blood CC end tissue repair in a subject. The products of the invention are useful CC and tissue repair in a subject. The products of the invention are useful CC pressure sores, venous sores, diabetic ulcers and burns and to promote CC skin graft growth, tissue repeals, proliferation of new blood vessels, considered the invention and organ repair by promoting angiogenic activity or insularization. This sequence represents the human VEGD protein used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VEGF-X; vascular endothelial growth factor; human; vulnerary; cytostatic; antirheumatic; antiarthritic; antipsoriatic; antidiabetic; treatment; angiogenesis regulator; vascularization regulator; cancer; psoriasis; rheumatoid arthritis; diabetic retinopathy; blood vessel; organ repair; tissue regeneration; tissue repair; wound; dermal ulcer; pressure sore; venous sore; diabetic ulcer; burns; skin graft growth; VEGD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                              New vascular endothelial growth factor protein, useful for treating or preventing diseases associated with inappropriate angiogenesis activity such as cancer, rheumatoid arthritis, psoriasis and wounds - \frac{1}{2}

                                                                                                                                                       The present sequence is the protein sequence of the human vascular endothelial growth factor D (VEGF-D). It was used to demonstrate the methods of the invention, which involve the screening of individuals to determine which vascular endothelial growth factor receptor 3 (VEGFR-3, also known as Flt4 or fms-like tyrosine kinase 4) alleles they possess and thus their likelihood of developing hereditary lymphoedema conditions associated with lymphoedema include Milroy-Nonne syndrome,

The patent discloses a method to treat neoplastic disease characterised CC by expression of fms-like tyrosine kinase 4 (Fit4) receptor (also CC referred as vascular endothelial growth factor receptor-3, VEGFR-3) in CC endothelial cells of blood vessels adjacent to malignant neoplasm. The CC method involves administering a compound that inhibits binding of a CC ligand to Fit4 thereby inhibiting Fit4 mediated proliferation of vascular cells. The compound is useful for treating neoplastic disease such as breast carcinomas, squamous cell carcinomas, lymphomas, melanomas can be used for manufacturing medicament useful for diagnostic screening, imaging and CC treatment of malignancies characterised by Fit4-expressing blood cells. The Fit4 gene maps to chromosomal region 5q35 and is expressed as 5.8 kb cand 4.5 kb mRNAs which differ in their 3' sequences and are CC differentially expressed in HEL and DAMI cell lines. Fit4 because (RTKs). It is used as a target for tumour imaging and anti-tumour therapy.

CC The FITA as a target for tumour imaging and anti-tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 14

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present amino acid sequence is the complete human prepro-vascular endothelial growth factor (VEGF)-D. VEGF-D has the ability to stimulate re-endothelialisation of an injured blood vessel, without significant stimulation of smooth muscle cell proliferation. It can bind to and stimulate VEGFR-2 (vascular endothelial growth factor receptor) and/or VEGFR-3 phosphorylation in cells that express such receptors. An anti-restenosis agent comprising either a VEGF-D gene or protein is used in a method to reduce or prevent restenosis and stenosis of a blood vessel following vascular trauma e.g., cardiovascular surgery and percutaneous transluminal coronary angioplasty.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

hypothetical protein F55G1.13 - Caenorhabditis elegans
C;Species: Caenorhabditis elegans
C;Date: 15-Oct-1999 #sequence_revision 15-Oct-1999 #text_change 15-Oct-1999
C;Accession: T29234
R;Murray, J; Le, T.T.
submitted to the EMBL Data Library, May 1996
A;Description: The sequence of C. elegans cosmid F55G1.
A;Reference number: Z20591
A;Accession: T29234
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Residues: 1-616 <MUR>
A;Coss-references: EMBL:U58750; PIDN:AAB00653.1; GSPDB:GN00022; CESP:F55G1.13
A;Experimental source: Strain Bristol N2; clone F55G1

pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score

VEGF-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HSSP; P15692; 1VPP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bound by non-covalent interactions.
SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and endothelial cell growth, stimulating their proliferation and migration and also has effects on the permeability of blood vessels. May function in the formation of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and activates VEGFR-2 (Flk1) and VEGFR-3 (Flt4) receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        colon,

VEGF-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDS) bound by non-covalent interactions (By similarity). SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
